

SILICONE

FAÇADE

MASONRY COATING

A wallcoating to reduce your...

- **Fuel bills**
- **Carbon footprint**
- **Environmental impact**

PRODUCT TESTED AND CERTIFIED
The German Thermal Insulation Ordinance:
1977, 1984 and 1985
The German Energy Saving Ordinance:
2002, 2004 and 2007

The sole UK stockist and distributor
for Isopaint Silicone Façade

Silicone Façade has been specified on many significant buildings, including The Kremlin.

Silicone Façade is the most technologically advanced wallcoating available today

FOR PRICING AND SUPPLY
IN YOUR AREA**

- **Water repellent masonry coating**
- **Self-cleaning**
- **Creates a dry building**
- **Eliminates damp**
- **Energy saving, reduces heating bills**
- **Hydrophobic coating, shuts out water ingress through masonry walls**
- **Breathable**
- **15-20 year lifespan**

It is a proven fact that wet walls transfer heat twice as quickly as dry walls

The wetter the wall the more energy has to be expended to obtain an ambient room temperature of 20C

**REDUCE
CO₂**

www.energycoatings.org.uk

Properties of Silicone façade:
Water repellent • Water vapour permeable • Weathering resistant
Highly abrasion resistant • 15-20 year lifespan • Self cleaning
Resistant to algae and moss etc • Made with Nano technology

When mineral building materials come into contact with water, the amount absorbed depends on their porosity.

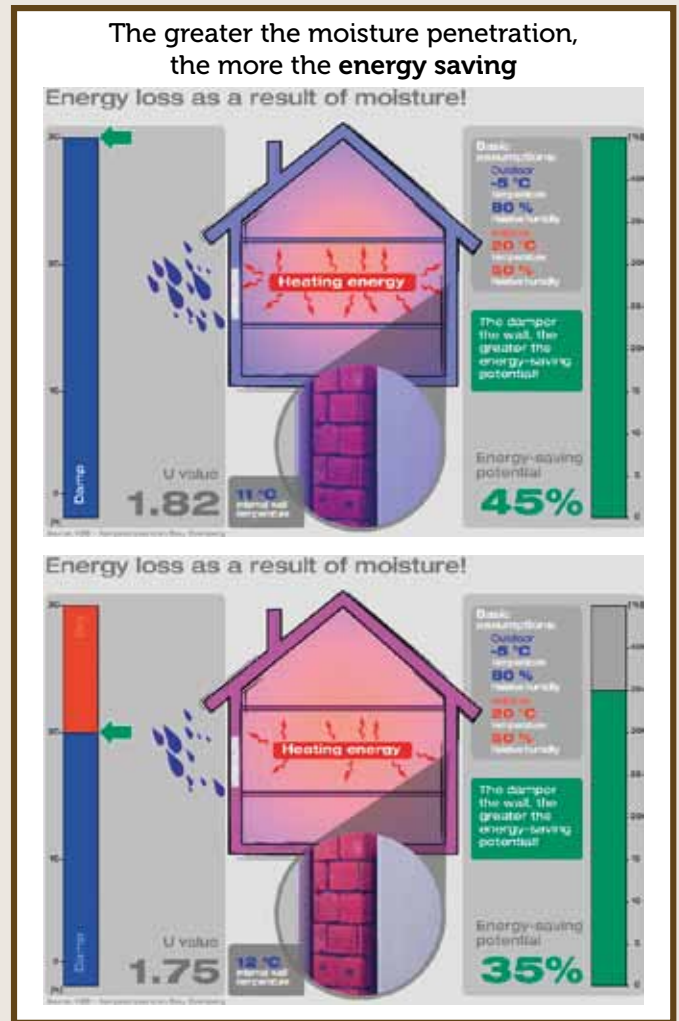

The result is damage in various forms, including:

- Penetration of moisture through the wall
- Cracks due to swelling and shrinkage
- Damage caused by frost and de-icing salts
- Efflorescence and salt damage caused by hydration and crystallisation
- Lime leaching
- Rust stains
- Dirt pick-up
- Attack by fungi, moss, lichen and algae
- Chemical erosion
- Impairment of the surfaces thermal insulation properties

Fortunately the above problems can be overcome with the use of Isopaint Silicone Façade wallcoating.
